

Op-Ed: Historic RFS Firmly Establishes South Dakota as Leader in National Energy Policy

This week, the House of Representatives passed an historic piece of energy legislation.

Reforming our nation's approach to energy production is more than a technological

Specifically, the bill requires that we as a country produce at least 36 billion gallons

The structure of this new, higher standard ensures that South Dakota will continue

Given the unique contributions our agricultural producers are ready, willing and able

Increasing the amount of renewable fuels produced in our country is only one part

By requiring automakers to increase the fuel efficiency of their fleets, American farmers

Our legislation also includes a Renewable Electricity Standard, or RES, which would

Adoption of the provisions within this landmark legislation will provide tremendous
